

Negative Simulons: Mathematical Examples

Negative Simulons: Mathematical Examples

- **Exclusion and Intolerance**

$$\text{Negative Simulons (Exclusion)} = 0.20 \times 100,000 = 20,000 \quad (1)$$

$$\text{Adjusted Simulon Strength} = 100,000 - 20,000 = 80,000 \quad (2)$$

- **Conflict and Aggression**

$$\text{Negative Simulons (Conflict)} = 0.30 \times 150,000 = 45,000 \quad (3)$$

$$\text{Adjusted Simulon Strength} = 150,000 - 45,000 = 105,000 \quad (4)$$

- **Suppression of Dissent**

$$\text{Negative Simulons (Suppression)} = 0.25 \times 200,000 = 50,000 \quad (5)$$

$$\text{Adjusted Simulon Strength} = 200,000 - 50,000 = 150,000 \quad (6)$$

- **Isolationism**

$$\text{Negative Simulons (Isolationism)} = 0.15 \times 180,000 = 27,000 \quad (7)$$

$$\text{Adjusted Simulon Strength} = 180,000 - 27,000 = 153,000 \quad (8)$$

- **Combined Negative Simulons**

$$\text{Total Negative Simulons} = 25,000 + 50,000 + 37,500 + 12,500 = 125,000 \quad (9)$$

$$\text{Adjusted Simulon Strength} = 250,000 - 125,000 = 125,000 \quad (10)$$

Summary of Examples

Aspect	Initial Simulon Strength	Penalty (%)	Negative Simulons	Adjusted Simulon Strength
Exclusion and Intolerance	100,000	20%	20,000	80,000
Conflict and Aggression	150,000	30%	45,000	105,000
Suppression of Dissent	200,000	25%	50,000	150,000
Isolationism	180,000	15%	27,000	153,000
Combined Negative Simulons	250,000	-	125,000	125,000

Table 1: Summary of negative Simulons and their impact on adjusted Simulon strength.
